Data and methodology
Data are compiled from PCT 15, Census 2010 SF-1. Same-sex couples are identified in households where Person 1 describes his or her relationship with another adult of the same sex as either a “husband/wife” or “unmarried partner”.

The reported number of same-sex couples in the state and the associated figure for same-sex couples per 1,000 households are based on official Census tabulations.

Adjusted data
All other data used in the report are adjusted figures and do not represent official Census Bureau tabulations. The adjustment procedure accounts for the likelihood that a small portion of different-sex married couples miscode the sex of a spouse and are incorrectly counted as a same-sex couple. It also takes into account the possibility that some same-sex couples may not be counted in Census tabulations due to concerns about confidentiality or because neither partner was Person 1 in the household.

Go here for a complete description of the adjustment procedure.
